

1. Let $Z \sim N(0, 1)$. Use the attached tables to solve for z .

- (a) $P(Z > z) = 98\%$
- (b) $P(Z < z) = 12\%$
- (c) $P(|Z| > z) = 5\%$
- (d) $P(|Z| < z) = 50\%$

2. Let $Q \sim \chi^2(17)$. Use the attached tables to solve the following.

- (a) Find numbers a, b such that $P(a < Q < b) = 95\%$.
- (b) Find numbers a, b such that $P(a < Q < b) = 99\%$.

3. Let X_1, \dots, X_n be an iid sample from a normal distribution $N(\mu, \sigma^2)$. If μ is **known** and σ^2 is **unknown** then we will consider the estimator

$$\hat{\sigma}^2 = \frac{1}{n} \sum_{i=1}^n (X_i - \mu)^2.$$

Show that $E[\hat{\sigma}^2] = \sigma^2$. [Hint: First show that $E[X_i^2] = \mu^2 + \sigma^2$. Then use linearity.]

4. Let Z_1, \dots, Z_n be an iid sample from a standard normal distribution $N(0, 1)$ and define

$$Q = Z_1^2 + Z_2^2 + \dots + Z_n^2.$$

- (a) Compute $E[Q]$.
- (b) Assuming that $Z \sim N(0, 1)$ implies $E[Z^4] = 3$, compute $\text{Var}(Q)$.

5. Let p be the unknown probability of heads for a certain coin. Before performing any experiments we assume that $H_0 = "p = 1/2"$ is true. If you flip the coin 100 times and let Y be the number of heads, what values of Y will cause you to reject H_0 in favor of $H_1 = "p \neq 1/2"$ at the 99% level of confidence?

6. Let p be the unknown proportion of Americans who like broccoli. Suppose that we take a poll of $n = 1000$ Americans and $Y = 300$ tell us that they like broccoli. Use this information to compute $(1 - \alpha)100\%$ confidence intervals for p when $\alpha = 5\%$, 2.5% and 1% .

7. Assume that the weight of pumpkins grown on a certain farm is $N(\mu, \sigma^2)$. In order to estimate μ and σ^2 we weighed a random sample of 7 pumpkins (in pounds):

10.7	8.5	9.1	10.3	13.7	9.7	9.3
------	-----	-----	------	------	-----	-----

Use the attached tables to find 95% confidence intervals for μ and σ^2 .

t-Distribution Table

The shaded area is equal to α for $t = t_\alpha$.

df	$t_{.100}$	$t_{.050}$	$t_{.025}$	$t_{.010}$	$t_{.005}$
