Are You Visual and Artsy?

Take Math 103 section O!

**Finite Mathematics with a Special Emphasis on Math & Art**

Tuesdays & Thursdays
9:30 – 10:45am, Memorial MM 314

Taught by (mathematically-trained) visual artist Lun-Yi Tsai, this course will provide humanities students with a basic mathematical perspective that will enrich if not complement their specific areas of study. In particular, this course aims to show how math and art, which are often thought to be polar opposites, are actually intimately related.

Includes lots of fun and creative activities! In the process you'll learn a bit about the shape of space, how we see things, how to make your own math art stuff, and how to talk using cool math terms (and actually know what your saying!).
